

12.2 How interferers have learned to be afraid

The Narda [SignalShark](#) loves to show interferers its teeth. Not even the smallest interference signal has a chance to escape its jaws. As if one predatory shark were not enough, the [SignalShark family](#) is growing! An impressive shoal of sharks, from [handheld](#) to [remote unit](#) and an [automatic antenna](#). If all of that sounds a bit bloodthirsty, why not read the ABC of interference hunting instead:

- [Pocket guide to interference localization](#) and
- [Practical RF interference localization](#)

Two manuals that will keep you afloat when you're tracking down interference.

Come visit us at [Electronic Warfare Europe 2019](#) from 13th to 15th May 2019 in Stockholm/Sweden at Stand E16 ([Narda](#) / [Amska](#)) and see our SignalShark product family for yourself.
