

3.2 EMF safety: EMF Directive 2013/35/EU is mandatory in the EU and exemplary for non-EU countries

The EMF Directive 2013/35/EU constitutes the minimum specification for protecting the health and safety of employees from electromagnetic fields. It is mandatory in the EU, but what about the rest of the world? Is there any need to rediscover the wheel?

If you need to assess workplaces, this Directive gives you valuable information, regardless of whether you are looking at office workstations or welding in the automotive industry.

The EU provides the documentation free of charge in more than 10 languages. You can find a [brief summary on our homepage under: EMF Directive 2013/35/EU](#). You will also find all the stuff you need to make measurements that comply with the standard, ranging from simulation software for high tension cables and transformer stations through to the clever, patented “Weighted Peak” method for measuring complex signals such as the bursts from welding machines in a matter of seconds. Within the EU, the Directive has been the law since 2016, so there’s no going back.
