

Narda SignalShark - the new generation in signal analysis:

3.1 Interference hunting made easy

You need two things to hunt down interference successfully: Good equipment, and lot of experience. It's well known that you get good equipment from Narda - like the IDA and the SignalShark. And we're more than happy to share our years of experience with you. Make the most of our vast storehouse of experience with:

1. **Pocket interference search lexicon**, which gives you all the technical terms you need to know to get to grips with interference hunting, briefly explained, so you know what you're dealing with.
2. **Practical RF interference searching**, which is a reference work in the world of interference hunting. It contains lots of practical tips and examples aimed at the layman as well as the complete professional.
There are excerpts from both these handbooks on our website, and you can get the full hardcopy versions from us or your local **Sales Partner**. Free of charge.
3. **Three-day training** "Localization and identification of signals using the hand-held direction finder", which is held at our factory locations or in your locality. Learn how to dig out every interference signal. You will then have all the tools you need to hunt down interferers.

As you can see, it's a complete package that takes all the worry out of interference hunting. Get started, right away!
