1 Introduction

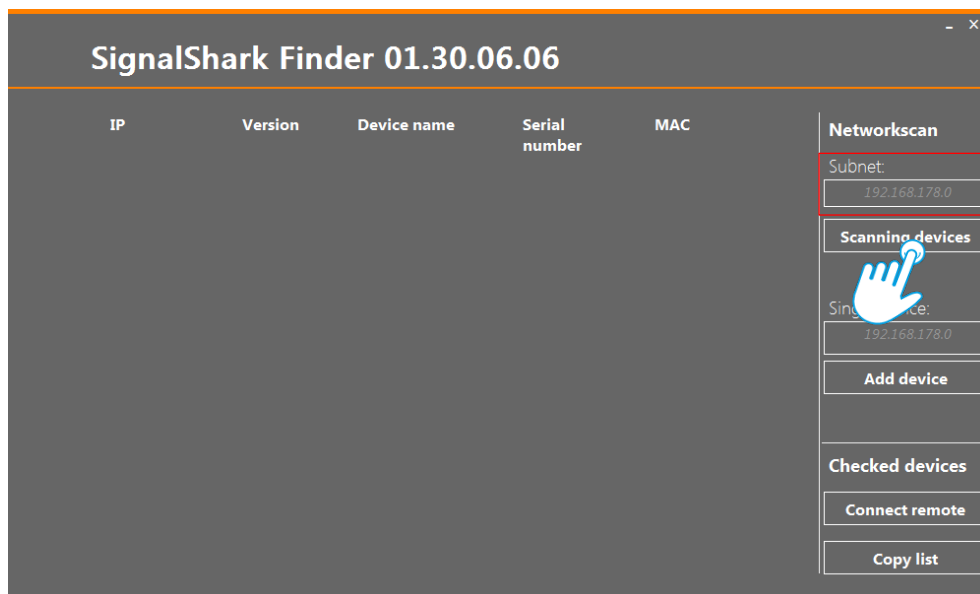

SignalShark Finder can be used to search a given network for SignalShark devices.

Besides IP and MAC address, information about the firmware version, the device name and the serial number of the SignalShark available in the network is listed. This information can be copied to the clipboard for further use in other programs.

The tool also allows easy connection to a SignalShark via remote desktop.

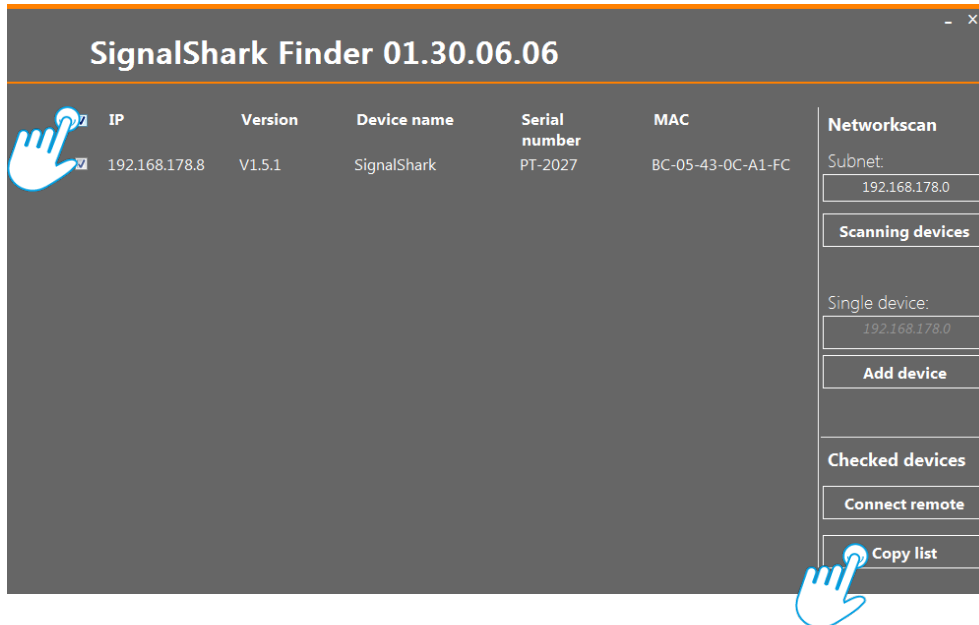

2 Scanning for Devices

- 1.) Open the SignalShark Finder tool
- 2.) Select the network subnet to be searched.
(The current network of the computer is entered by default)
- 3.) Tap on "Scanning devices"

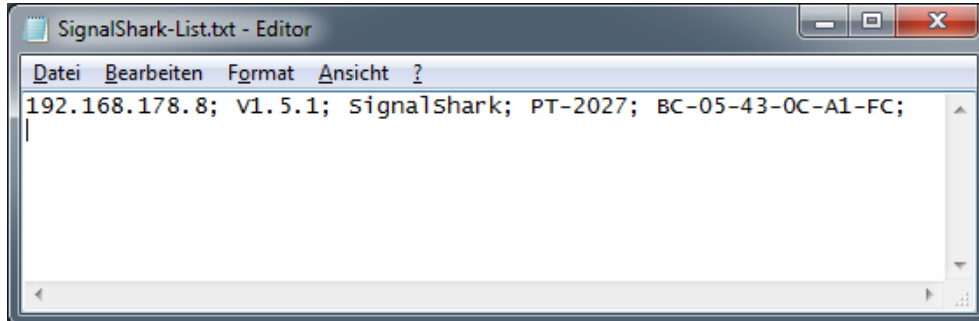

3 Copy List to Clipboard

- 1.) Select the list items to copy
- 2.) Tap on the "Copy List" button.

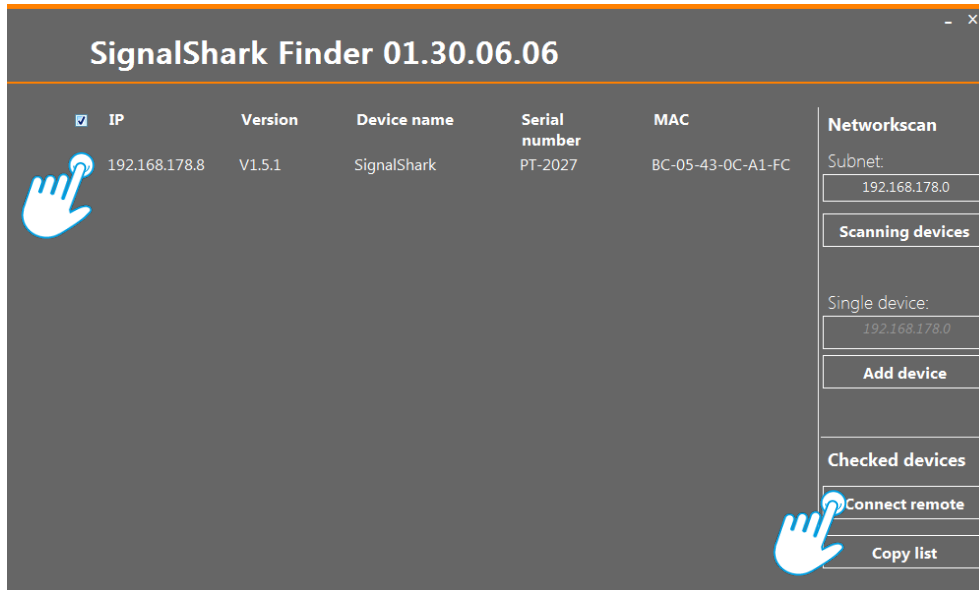

- 3.) The copied list items can then be inserted into another program via the clipboard.

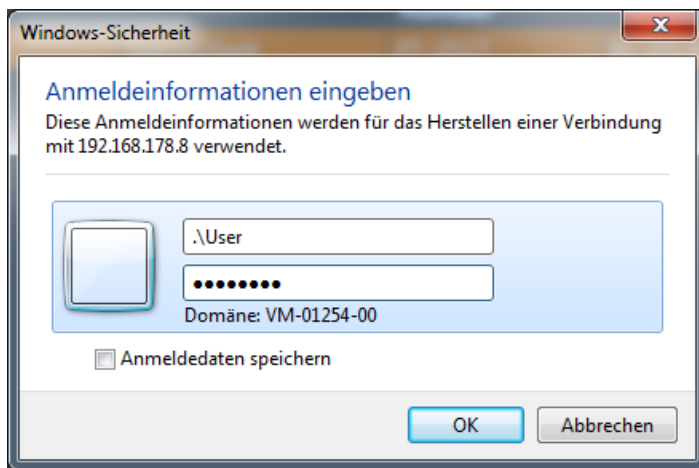

4 Connect to a SignalShark via Remote Desktop

- 1.) Select a device from the list to connect to.
- 2.) Tap on the “Connect remote” button to open a Remote Desktop session.

- 3.) Enter the user name and password for the connection.

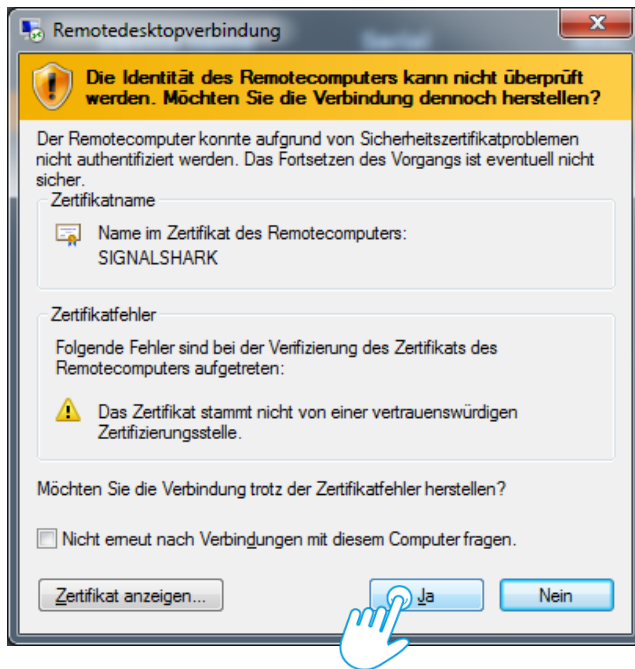

Note

To log in locally on the SignalShark, the string ".\" must be entered before the user name.

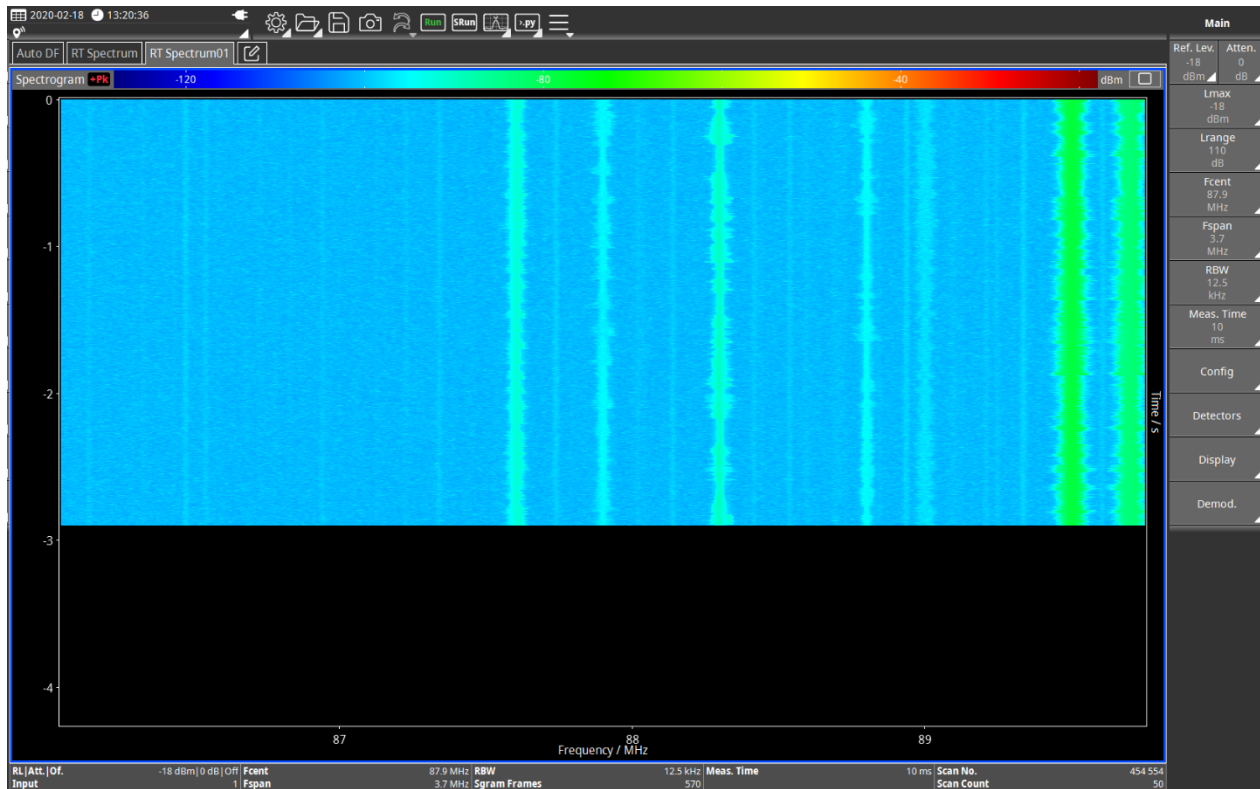

The default user name is **"User"**

The default password is **"changeme"**

4.) Confirm the security certificate

5.) Now the selected SignalShark can be operated remotely.
