

Script “signalsharkwol”

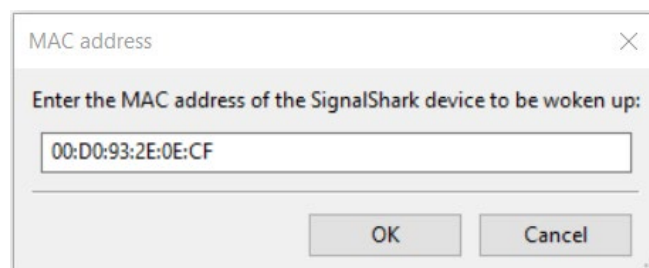

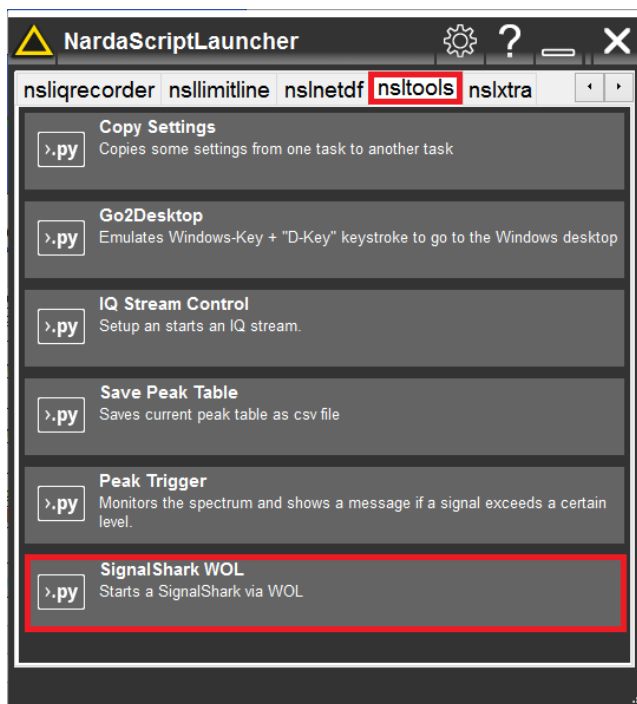

Description:

The script "signalsharkwol" allows the user to wake up a SignalShark 3320/3330 device on LAN by sending a UDP broadcast message. SignalShark 3310 handheld devices do not support WoL.

When the script executes, it prompts the user to enter the IPv4 UDP broadcast address first. Then it prompts the user to enter the 6-byte MAC address of the signalshark that the user intends to wake-up-on-LAN (WoL). The script uses the WoL port 4000 to send the broadcast message with the MAC address enclosed.

Procedure

1. Open the Narda Script Launcher application and select the "nsltools" tab.
2. Select the script "SignalShark WOL".
