

### 13.1 5G measurement method for checking EMF emission values published

Everyone's talking about 5G. It's the miracle network that can do it all! Rarely has the advance praise from technophiles for a new generation of mobile communications been so effusive. But, at the same time, all the old anxieties have resurfaced among the public. The only way they can be settled is by education. And to educate, you need to measure the exposure levels.

Discussions are being held worldwide about a suitable measurement method, since the new network puts new demands on the devices needed to measure it. Narda in cooperation with public authorities and manufacturers has now proposed a measurement method for discussion. Follow us on the [Health Physics](#) website and discuss our proposal. For safe 5G NR (New Radio).
