

13.2 Be certain about uncertainty

There's some crap in every measurement, as the saying goes. Well, as a maker of measuring devices, we beg to disagree! It's all a question of the measurement uncertainty. But the very word uncertainty makes many users uncertain. To be sure, measurement uncertainty needs to be considered. But how do you do it?

It's easy if you read the right stuff. Which we have for you: *The* book about *the* selective EMF measuring device, the Narda SRM-3006: **“Measuring RF Electromagnetic Fields”**. This book explains the subject of measurement uncertainty concisely and practically, along with lots of other topics. Just enough to be certain. We know, it's necessary — for more **measurement uncertainty**

1.5.3 Code selective measuring devices	29
1.5.4 Measuring device calibration.....	29
1.5.5 The near field / far field problem.....	30
1.6 Making the measurement.....	35
1.6.1 Setting the measuring devices correctly.....	35
1.6.2 The effects of spatial variations in field strength.....	35
1.7 Processing the measurement results.....	39
1.8 Measurement uncertainty	40
1.9 Documentation.....	43
1.10 Quality assurance.....	45
2 The SRM-3006 and its measurement capabilities	48
2.1 Brief description of the SRM-3006	48

You can order the [book](#) from your Narda [sales partner](#).
