

17.3 SignalShark with touch

Have you got the new [Firmware 1.5.1](#) on your [SignalShark](#) yet? If not, it's time you did. Because now the SignalShark has real touch. Want to shift frequencies? No need to keep on turning that rotary control anymore! All it takes now is a tap of your finger on the screen. Zoom in, zoom out: Just use your fingers. Adjust the level range to the current measured values: All done by touch now. And you can move the marker to the position you want just with your finger, too.

Every instrument has its own style when it comes to operation. The SignalShark is no different. There is now a super [Quick Guide](#) to help you get acquainted with the SignalShark fast. This is much more than a short operating guide, but much less than the full operating manual. It is a must for every new user of the SignalShark, as well as for anyone who wants to know what the new firmware Release 1.5.1 includes, besides touch functionalities.

Software updates:

There's new software and a new firmware release for the Area Monitors [AMB-8059](#) and [AMS-8061](#):

Download the AMB-8059 firmware release [here](#); the AMS-8061 firmware release [here](#).

There's also a new EMF GPS logger PC software for the AMB-8059 available [here](#).
