

## 22.2 No more graveyards full of keys

Receivers have to be fast. The interference signal that you are trying to capture isn't going to wait for you. On the other hand, you also need more and more documentation and evaluation functions. Maybe, you also need automatic direction finding or digital signal classification.

One key per function would be the fastest option. However, that is impractical with the number of functions used today. The control panel would be a graveyard of row after row of keys. Softkeys are the answer, preferably combined with a touchscreen. Smartphones have led the way in this, banishing all keypad operated cellphones from the market.

It's the same for receivers: a graveyard full of keys is so yesterday: It can't be updated or converted and is slow and inflexible, especially if each key has two or three functions. All that is a thing of the past.

With the [SignalShark](#), we say welcome to the new era of interference detection. Interference signals can no longer escape the SignalShark. Find out what the SignalShark touchscreen can do by watching the following video.

You can watch the video [here](#).

**Software updates:**

There is a new software update for the Area Monitor AMB-8059 available for download from the Narda website [here](#). You will need to register on our website for this.

Also available for immediate download are the updated data sheets for the [Area Monitor AMB-8059](#) and [Area Monitor AMB-8059 \(Car Mounting Kit\)](#).

There is also a new data sheet for our [EHP-200](#). Read all about it and download it [here](#).

**Instrument demonstrations:**

Would you like a demonstration of these instruments or another Narda product? Contact your [Narda sales partner](#) and ask for details.

**Seminars:**

The seminar “[Exposure measurements on wireless transmitters with the SRM-3006](#)” is aimed at beginners, more experienced, and professional users in the field of selective measurement. Register for this seminar now [here](#). You can also ask our [sales partners](#) about individual seminar dates.

Want to keep up with the latest news? Check regularly for further updates at Narda [here](#).
