

25.3 One probe just for cellular networks
Or: Everybody else is to blame

Cellphone network providers don't have it easy. Everyone moans that they have no reception, but they don't want the base stations that are needed. So, network providers often feel hard done by, especially since radio broadcasters have been blasting everybody with tens of kilowatts for decades. Enough of that! Now there is a **band-limited probe** for the **NBM**. It blocks out broadcast radio signals and only measures the cellular signals. That evens things up a bit: **EF0692**, from 600 MHz to 6 GHz. Now you can know exactly what you're transmitting.

Software updates, data sheets, and operating manuals:

The latest software updates for the [AMB-8059](#) Area Monitors and the [AMS-8061](#) are available for download from the Narda website.

The NardaAMInstaller, which replaces the NardaConfigurator with immediate effect, is the configuration assistant that helps you to set up the AMB-8059 and AMS-8061 monitoring stations. The updated Version 15 is also now available for download from the Narda website [here](#).

There is an updated [data sheet](#) as well as an updated [operating manual](#) available on our website for the stationary high frequency warning device from Narda, the SMARTS II.

Instrument demonstration:

If you would like a demonstration of these or other Narda products, contact your local [Narda sales partner](#) and ask about availability.

Seminars:

The [seminar “Exposure measurements on wireless transmitters with the SRM-3006”](#) is aimed at beginners, more experienced, and professional users in the field of selective measurement. Register for this seminar now [here](#). You can also ask our [sales partners](#) about individual seminar dates. The next date is October 18 – 20, 2021.

Want to keep up with the latest news? Check regularly for further updates at Narda [here](#).
