

29.3 **RadMan 2:** Reliable detection of pulsed fields

Generally, mobile wireless signals are considered as pulsed signals. However, today's huge demand for information means that the spectrum looks much more like a continuous wave (CW) signal.

Among the “real” pulsed signals in broadband measurement, the radar signal is the foremost. Due to the immense impulse power, the call for personal protective equipment has become very loud from those who are to work in close proximity to such signals.

The **RadMan 2 XT** is equipped with a “Pulse Mode” specifically for this environment.

You can find out all about this in the [data sheet](#) and [brochure](#) for the device. Stay safe, including in the vicinity of radar installations.

Software updates, data sheets, operating manuals and videos:

Available now for download from our website:

- **AMB-8059:**
 - New [software version 1.59](#) now available
 - Configuration assistant NardaAMInstaller version 17: New [firmware](#)
- **AMS-8061:**
 - New [software version 1.37](#) now available
 - Configuration assistant NardaAMInstaller version 17: New [firmware](#)
- **EFC-400:**
 - Latest [2022 demo version](#) now on the Narda website
 - [New features of 2022 version](#) now available
- **5G:** Flyer "[Measuring principle of code-selective measurements at 5G](#)" now available on the website

Videos:

The application videos for our products are all now available directly on our website here:

Seminars and webinars:

- ❖ Our [seminar "Exposure measurements on wireless transmitters using the SRM-3006"](#) is aimed at beginners, more experienced and professional users in the field of selective measurement of electromagnetic fields. The dates for 2022 have been fixed, with the next seminar scheduled for May 2 – 4, 2022. Sign up soon to enjoy the benefit of the early booking discount.
You can also ask our [sales partners](#) about personalized seminar dates.

New: Regular live webinars for you:

- ❖ Tuesday 7th December 2021: Area Monitoring (followed by Q+A)
Contents: At least since the dieselgate scandal it has become clear that it is better to verify than to trust. Narda is not only the inventor of permanent, 24/7 monitoring of environmental pollution by electromagnetic fields, but is also the world leader in the technology of what are known as area monitors. This live webinar aims to introduce you to this technology and to answer your current questions.
- ❖ Next date to be announced: 5G in a nutshell; part 5
(followed by Q+A)
Contents: If there were still some unanswered questions from parts 1-4, today we have a lot of new information and, above all, solutions. So, we'd like to get you up to

speed with the latest in code selective measurement for 5G wireless systems.

❖ *Next date to be announced:* **Finding Interference in Mobile Cellular Networks with Narda SignalShark** (followed by Q+A)

Contents: Did you know...

... how EASY and FAST it is to trace interference with the Narda SignalShark?

... how sophisticated vehicle-based radio direction finding can be?

... how SignalShark can transfer its localization result to a navigation app that takes you right to the interference source?

All these events will be in English.
